Skills

Product & Program Management: MS Project (Gantt), project scheduling and progress tracking, cross-functional coordination, stakeholder training, change management (**MOC**), **SOP** and process standardization.
Data & Tools: Python data analysis, **Excel/VBA** automation, **MATLAB**, **SAP EAM**, **HMI/SCADA** interfacing, **AutoCAD**.
Problem Solving & Improvement: Root Cause Analysis (**RCA**), failure mode analysis, time study, cycle time analysis, **DMAIC**, **IL6S**, **5S**, Kaizen.
Technical Domain: Process control, manufacturing operations, battery and fuel-cell testing, **Aspen Plus**, **Simulink**.

Experience

Incoming Automation Engineering Intern — Starting January 2027
Suncor Energy — *Sherwood Park, AB*

Supply Chain Intern (Process & Operations) — January 2026 – April 2026
Mondelez International — *Scarborough, ON*

- Built an automated Excel planning tool in **VBA**, used weekly to plan inbound materials and outbound production across **6** production lines, cutting manual data-entry errors.
- Used **RCA** and cycle time analysis to find the sources of conveyor jams across **3** production lines, increasing **MTBF** by **12%** toward a **100**-minute target.
- Supported a new palletizer rollout with the project team, reviewing **OEM** manuals, specifications, and **MOC** documentation, and delivered cross-functional training to maintenance and warehouse teams ahead of **SAT**.
- Translated palletizer faults seen on the **HMI** into system-level failure modes for the controls team, who rewrote the affected **SCADA** logic.
- Led warehouse **5S** and Kaizen initiatives with contractors, standardizing operations through **SOPs** and **OPLs** and improving audit readiness toward Mondelez **CBN**.

Process & Continuous Improvement Intern — September 2024 – December 2024
Hood Packaging Corporation — *Burlington, ON*

- Built an automated **VBA** "Order Name Generator" for **2,150** job orders, cutting order redundancy by **68%**.
- Created a plant-wide order naming convention and **SOP**, streamlining specifications and reducing order delays by **17%**.
- Updated **3** plant layout drawings in **AutoCAD** to reflect **5** new equipment installations and removals.

Manufacturing Engineering Intern — May 2025 – August 2025
Hood Packaging Corporation — *Burlington, ON*

- Logged **1,200** maintenance parts for **8** production lines in **SAP EAM**, improving stock valuation and tracking; ran time studies on repair turnaround to verify a **40%** improvement over **2** months.
- Developed a plant-wide chemical storage standard across **9** storage areas and **70+** chemicals, with color-coded bins, **WHMIS** signage, and **PPE** guides, passing the **SQF** audit.

Propulsion Controls and Modelling Team Member — February 2024 – March 2024
University of Waterloo EcoCAR Design Team (UWAFT) — *Waterloo, ON*

- Researched and implemented boost mode control logic into the vehicle's control system to enhance propulsion performance.
- Investigated **CANalyzer** for Diagnostic Trouble Code creation and wrote a comprehensive guide for the controls team.

Leadership Experience

NSBE UWaterloo President: Leading a **100+** member chapter's strategic direction, executive team, and partnerships, raising over **$21,000** in corporate sponsorships while growing attendance and representing the chapter at regional and national forums.
NSBE ECZ Vice-Chair: Supporting strategy and development across Eastern Canada, coordinating leadership initiatives and conference planning with zonal chapter presidents.
AfroZone Co-Founder: Leading vision and user research for an app improving access to Black cuisine and groceries.

Projects

Purple n' Perfect | *Excel, Saponification*

- Developed an **Excel** soap calculator that accurately predicted bar properties, producing a **185.6 g** bar of soap with a **91%** match.
- Established a workshop on campus in collaboration with the Dean of Engineering at the University of Waterloo, promoting it to over **100** potential consumers.
- Produced soap through saponification reactions and esters through esterification reactions.

Hydrogen Sailors | *Excel, MS Project*

- Led the team using **MS Project** Gantt charts to optimize task assignments and track project progress.
- Designed and built a hydrogen fuel cell boat, analyzing fuel-cell efficiency across **4** prototype reports.

Education

University of Waterloo — Waterloo, ON
Bachelor of Applied Science in Chemical Engineering — *Graduation 2028*

Relevant Coursework: Process Data Analysis, Process Control (in progress), Electrochemical Engineering (in progress), Chemical Reaction Engineering, Heat & Mass Transfer, Thermodynamics.
